### Biopsychosocial Assessment Criteria - DPHHS

The Biopsychosocial Model and Case Formulation (also known as the Biopsychosocial Formulation) in psychiatry is a way of understanding a patient as more than a diagnostic label. Hypotheses are generated about the origins and causes of a patient's symptoms. The most common and clinically practical way to formulate is through the biopsychosocial approach, first described in 1980 by George Engel.

### Biopsychosocial Model and Case Formulation - PsychDB

Psychosocial assessment. In addition to discussing confidentiality and its limits, it is helpful to normalise the process of a mental health assessment and explain the process. This may include seeking permission to ask questions, and letting young people know that they don't have to answer questions.
