A colloid is a type of homogeneous mixture in which the dispersed particles do not settle out. The insoluble particles in the mixture are microscopic, with particle sizes between 1 and

1000 nanometers. The mixture may be termed a colloid or a colloidal suspension. The phrase "colloidal solution" is incorrect.

## **Colloid - Chemistry Glossary Definition - ThoughtCo**

In chemistry, a colloid is a mixture in which one substance of microscopically dispersed insoluble or soluble particles is suspended throughout another substance. Sometimes the dispersed substance alone is called the colloid; the term colloidal suspension refers unambiguously to the overall mixture (although a narrower sense of the word suspension is distinguished from colloids by larger ...

## **Colloid - Wikipedia**

A group of mixtures called colloids (or colloidal dispersions) exhibit properties intermediate between those of suspensions and solutions . The particles in a colloid are larger than most simple molecules; however, colloidal particles are small enough that they do not settle out upon standing. Figure 1.

Solutions, suspensions, colloids, and other dispersions are similar but have characteristics that set each one apart from the others. Solutions A solution is a homogeneous mixture of two or more components.

## **Solutions, Suspensions, Colloids, and Dispersions**

A colloid is one of the three primary types of mixtures, with the other two being a solution and suspension. A colloid is a mixture that has particles ranging between 1 and 1000 nanometers in diameter, yet are still able to remain evenly distributed

throughout the solution.

The nature of colloidal particles. To begin, you need to recall two important definitions: a phase is defined as a region of matter in which the composition and physical properties are uniform. Thus ice and liquid water, although two forms of the single substance  $H_2O$ , constitute two separate phases within a heterogeneous mixture.; A solution is a homogeneous mixture of two or more substances ...
