Decision making in large animal surgery

Collective animal behavior is a form of social behavior involving the coordinated behavior of large groups of similar animals as well as emergent properties of these groups. This can include the costs and benefits of group membership, the transfer of information across the group, the group decision-making process, and group locomotion and synchronization. Studying the principles of collective animal behavior has relevance to human engineering problems through the philosophy of biomimetics. For i

File Type PDF Decision Making In Large Animal Alimentary Tract Surgery

San Diego Zoo and UCLA are researching animal decision making across disciplinary boundaries. In a recent study, they investigated how animal decision making can be affected by human impacts on the environment. They argue that understanding the ways animals respond to different situations can help scientists conserve species more effectively.

Think like an animal: Understanding animal decision making ...

A diversity of decision-making systems has been observed in animal collectives. In some species, choices depend on the differences of the numbers of animals that have chosen each of the available options, whereas in other species on the relative differences (a behavior known as Weber's law), or follow more complex rules.

...

A helpful starting point to framing normative questions around animal care decision-making is the status quo. By looking at who is currently making such decisions, how they are made, what factors are taken into account, and how conflict is resolved, it will be easier to see where changes need to be made and how that might be done.
