In the past fifteen years experimental and theoretical characterisation of the pre-failure deformation properties of geomaterials has developed enormously. In recognition of these important research developments a Geotechnique Symposium in Print (SIP) was held at the Institution of Civil Engineers in 1997.

Micromechanical modeling of geomaterials is challenging

Bookmark File PDF Deformation Characteristics Of Geomaterials Proceedings Of The 6th International Symposium On Deformation Characteristics Of Geomaterials Buenos Aires 18 November 2015 Buenos Aires, Argentina

because of the complex geometry of discontinuities and potentially large number of deformable material bodies that contact each other dynamically. In this study, we have developed a numerical approach for micromechanical analysis of deformable geomaterials with dynamic contacts. In our approach, we detect contacts among multiple blocks ...

Microscale mechanical modeling of deformable geomaterials ...

The strength and deformation characteristics of bounded geomaterials, viz. natural rocks and cemented geomaterials, under creep and cyclic loading conditions are of prime significance for reliable prediction of the long-term performance of natural slopes, large-scale foundations, tunnels and other deep underground projects located in seismically active areas.
