Physical exam. Your doctor will look in your ear for possible causes of your hearing loss, such as earwax or inflammation from an infection. Your doctor will also look for any structural causes of your hearing problems.

Hearing loss - Diagnosis and treatment - Mayo Clinic

Early diagnosis of hearing loss is important. Current research has shown that babies who are diagnosed early and who start wearing hearing aids and attending early intervention services by six months of age may develop language and communication that is similar to children with normal hearing by the time they start school.

Early diagnosis of hearing loss - why now and what's next?

Causes of hearing loss include: Damage to the inner ear. Aging and exposure to loud noise may cause wear and tear on the hairs or nerve cells in the cochlea that send sound signals to the brain. When these hairs or nerve cells are damaged or missing, electrical signals aren't transmitted as efficiently, and hearing loss occurs.

Hearing loss - Symptoms and causes - Mayo Clinic

Screening during early childhood or beyond the newborn period is critical because hearing loss is an invisible condition. Between birth and age five, the incidence of hearing loss doubles. Just because a newborn passed their hearing screening at birth, it is not a guarantee that a late onset and/or progressive hearing loss won't develop.

Why is early hearing loss detection important? Diane L ...

Conductive hearing loss results from a physical obstruction that prevents sound from traveling through the ear canal properly. Unlike nerve damage, doctors can often correct this form of loss through surgery. The obstruction can stem from a malformation of the ear canal or benign tumors that don't impact the nerves.
