literature. It adopts the perspective that physical and social factors are inextricably linked in their influence on human behaviour and experience and that the world in which we live is changed and often damaged by human action.;

Environmental Psychology: Behaviour and Experience in

...

Behaviorists brought an emphasis on context to the conversation, insisting that both environmental context and personal context (e.g., personality, dispositions, attitudes, views, experience) are vital determinants of behavior. Although behaviorism generally fell out of style as the leading perspective in psychology, its improved focus on contextual factors lived on.

A Career in Climate and Environmental Psychology

Summary - Environmental psychology is a field of study that examines the interrelationship between environments and human affect, cognition and behavior (Bechtel & Churchman 2002; Gifford 2007; Stokols & Altman 1987). The field has always been concerned with both built and natural environments with early research emphasizing the former (Stokols 1995; Sundstrom, Bell, Busby, & Aasmus 1996).

...

Environmental psychology is an interdisciplinary field that focuses on the interplay between individuals and their surroundings. It examines the way in which the natural environment and our built environments shape us as individuals. The field defines the term environment broadly, encompassing natural environments, social settings, built environments, learning environments, and informational environments. Environmental psychology was not fully recognized as its own field until the late 1960s when
