Set the High End of the Amplifier's Bandwidth. R1, R3, and C2 form a low pass RC filter at the amplifier's input that defines the high end of the amplifier's bandwidth: In a low pass filter, frequencies above the cutoff are muted. This filter has two functions.

How to Design and Build an Amplifier With the TDA2050 ...

The amp is a so called Gainclone, using one LM3886 op-amp per channel. The power supply is based on a (way too large) 230VA toroid transformer. It took me about 32 hours to build the amp and power supply. In this Instructable, I'll describe how I made the power supply and amplifier.

Make Your First Serious Amplifier : 10 Steps (with ...

Output power stage is basic Class B amplifier made of high-power transistors Q16 and Q17. These transistors are pre-driven by lower power Q14 and Q15. Combined, they form something called Sziklai pair, that improves current gain of the output stage. Power transistors are biased by collector follower Q10, R18, R19, R21, and RV1.

This might be an integrated amplifier, but it really is more like a separate pre- and power amplifier in a single box rather than a compromised electrical design. Build quality is excellent. Thanks to its impressive power amp circuitry, this is an amplifier that will have no trouble driving difficult speakers to high volume levels.
