

Microdur Mic 10 Portable Hardness Tester Uci

Thank you for reading **microdur mic 10 portable hardness tester uci**. As you may know, people have search hundreds times for their favorite books like this microdur mic 10 portable hardness tester uci, but end up in malicious downloads.

Rather than enjoying a good book with a cup of coffee in the afternoon, instead they are facing with some harmful bugs inside their desktop computer.

microdur mic 10 portable hardness tester uci is available in our digital library an online access to it is set as public so you can get it instantly. Our digital library spans in multiple countries, allowing you to get the most less latency time to download any of our books like this one. Kindly say, the microdur mic 10 portable hardness tester uci is universally compatible with any devices to read

Much of its collection was seeded by Project Gutenberg back in the mid-2000s, but has since taken on an identity of its own with the addition of thousands of self-published works that have been made available at no charge.

Microdur Mic 10 Portable Hardness

MICRODUR MIC 10 - Portable hardness tester (UCI) PI 453 2.0504 Range of application Rapid hardness tests, simple handling and a high degree of test safety. The MIC 10 works to the UCI method of measurement (Ultrasonic Contact Impedance). The UCI method enables rapid and comfortable measurements: Apply the probe - Read off the test data.

MICRODUR MIC 10 - Portable hardness tester (UCI)

The MIC 10 uses the UCI (Ultrasonic Contact Impedance) method for efficient and accurate measurements by electronically measuring the Vickers diamond indent and then displaying the hardness value instantly. This portable hardness tester can test hard to reach places and can measure in any direction, making it a flexible solution for operators.

This operational ease is achieved because the Vickers diamond indent in the material's surface is electronically measured and instantly displayed as a hardness value without using the cumbersome optical evaluation of a microscope normally associated with Vickers hardness testing. The small, handy MIC 10 makes life easy for you: a hardness tester that you can take anywhere - on scaffolds for testing large containers and pipes, or for testing components at any location.

The hardness tester MIC 10 from Krautkrämer is handy, easy to operate and can carry out tests quickly without any difficulty. It mainly is suitable • for hardness measurement of low and non-alloyed steels, • for hardness measurement of high-alloyed steels, • for hardness measurement of nonferrous metals. The MIC 10 can be delivered in two versions:
