book, its original structure is still largely the same. The field of model theory has changed a lot since the early 70's. For instance, in 1978 Shelah wrote a famous book that simultaneously answered many open questions in model theory and changed the direction of the whole subject, and the 1990's have seen many new applications to algebra and other

Since the second edition of this book (1977), Model Theory has changed radically, and is now concerned with fields such as classification (or stability) theory, nonstandard analysis, model-theoretic algebra, recursive model theory, abstract model theory, and model theories for a host of nonfirst order logics. published in 1939, was the first attempt to develop a fundamental theory of scientific inference based on Bayesian statistics. His ideas were well ahead of their time and it is only in the past ten years that the subject of Bayes' factors has been significantly developed and extended. Recent work has made Bayesian statistics an essential subject
