Though radar systems have many specific applications, radars perform three general functions, with all the specific applications falling into one or more of these general functions. The three primary functions are search, track, and image. The radar search mode implies the process of target detection.

This is a first look at the concepts and theory of operation of modern radar systems. I got this book to supplement some of the classics by Skolnik, Barton, Blake, et. al., mostly because many of these, though still valuable in their own right, were written before modern techniques based on current hardware became prevalent.
