Psychopharmacology - Wikipedia

Psychopharmacology, the study of how drugs affect the brain and behavior, is a relatively new science, although people have probably been taking drugs to change how they feel from early in human history (consider the of eating fermented fruit, ancient beer recipes, chewing on the leaves of the cocaine plant for stimulant properties as just some examples).

Psychopharmacology | Noba

The first generation of antidepressants consisted of monoamine oxidase inhibitors (MAOIs) and tricyclic antidepressants. Monoamine oxidase is an enzyme that metabolizes a range of chemicals in the brain and in other parts of the body.

Psychopharmacology: Studying How Drugs Affect the Mind and ...

MAO inhibitors (MAOIs) Class of drugs that inhibit monoamine oxidase (MAO), thereby causing an accumulation of catecholamines and serotonin in the brain. They are often used to treat clinical depression.
