The codes for this exam is: Mechanical - 16-Mec-A6 (or you may see it like YY-Mec-A6, Mec-A6) The exam tests candidate's understanding and knowledge of advanced fluid mechanics. Format: 3-hour long, open book exam. From the questions that are asked in the exam, only five need to be attempted.

Advanced Fluid Mechanics (Mec-A6) - Solutions & Help

Solution We are to define the Mach number of a flow and the meaning for a Mach number of 2. Analysis The Mach number of a flow is defined as the ratio of the speed of flow to the speed of sound in the flowing fluid. A Mach number of 2 indicate a flow speed that is twice the speed of sound in that fluid.

Solution 1.1. To get started, first list or determine the volumes involved: $v_d = \text{volume of water dumped} = 100 \text{ cm}^3$, $v_c = \text{volume of a sip} = 5 \text{ cm}^3$, and $V_2 = \text{volume of water in the oceans} = \epsilon 4\pi R D \gamma$, where, R is the radius of the earth, D is the mean depth of the oceans, and γ is the oceans' coverage fraction.
