However, there are still many people who as well as don't behind reading. This is a problem. But, considering you can sustain others to start reading, it will be better. One of the books

Swanson Speed Square Manual - s2.kora.com

The aim of this tutorial is to provide an understanding of how to read two main scales on a speed square. A speed square is a tool that just about every carpenter will have in her bag. It can be used to make lines perpendicular (square) to a board's edge. And it can be used to mark any angle (between 0 and 90 degrees) across a board's face. There are many other ways the speed square

can be used, but I will focus on these two in this tutorial.

How to Read a Speed Square : 4 Steps - Instructables

Stanley has the manual for their QuickSquare online and I found a public copy of the Swanson Speed Square manual (see links below). The Stanley manual does a great job of explaining all of the different roof types, includes a glossary of terms, and shows you how to use a square to find the correct pitch for different types of roofs.

How to Use a Speed Square — Skill Builder | Make:

x 4's, lay a carpenter square body flush with top edge of the rafter and marking the bottom edge of the square body. For rafters made in 2 x 6's or larger, lay the square body flush with the bottom edge of the rafter and mark along top edge of the square body. On rafters without an eave, the measuring line is along the top edge of the rafter.
