No Evidence for Effects of Breeding Density and Male ...

Some males of the pied flycatcher enhance their individual fitness by mating with two females, one of which receives their full support in caring for the brood, while the other is given very little or no aid and therefore, on average, produces a much reduced brood. These so-called secondary females thus have a low fitness.

The Pied Flycatcher (Poyser Monographs) Arne Lundberg: T ...

We have examined male and territorial factors which might influence female mate choice in the Pied Flycatcher (Ficedula hypoleuca). Mating success of males was largely determined by the order of arrival on the breeding grounds. Females actively selected those males that had been longest in the area. This is likely to be due to territorial cues, early males having the best territories.
